Color: Available in:
Black, Red, Blue

Country of origin: USA
NATO Stock number: 6515-01-537-9259

Quantity: 1
Weight: 141 g

Designed by formal special operations warfighters and proven in combat service for almost a decade, the MET GEN III is designed to be used in the most austere of environments.

The MET is a lightweight open-loop system composed of a sturdy strap and aluminum windlass. As a true open-loop system, this tourniquet comes apart completely to place around a limb and doesn't need to be fully cinched down prior to engaging the windlass; even if loosely applied, by turning the windlass the slack will uptake and fully tighten the tourniquet. It has two securing points to lock down the windlass after application: one that is adjustable and one with Velcro.

The MET Gen III provides a one-handed application with a hardened aluminum windlass and tough 1000 Denier nylon to create a sturdy tourniquet that is easy to apply and stays in place.
