Tariff:	39232990
Weight:	0,746kg

Any medic that operates in a marine or rainy environment knows how important it is to keep their medical equipment dry. The Diveable Pack Liner (DPL) is a completely waterproof Velcro®-in liner for the 2ndLine™ Main Pack.

The DPL completely seals the contents airtight and water tight.

Pressure can be adjusted in the pack with the oral inflation hose at the top. When sealed, the pack will float and can act as a floatation platform.

The pack can be dived with the DPL installed and the addition of weights to make it neutrally buoyant.
