Weight:	20g

ELDON BIOLOGICALS A/S is a Danish manufacturer of dry format cards for blood grouping. Based on an invention by the Danish physician Knud Eldon, EldonCards have been manufactured and used for more than 40 years.

Over time millions of cards have been utilised to establish individuals' blood group within the AB0-Rhesus (D) systems and to ensure compatibility of patient/donor blood. Today EldonCards are based on the use of special formulations of selected monoclonal antibodies.
