

## BOA, IV Constricting Band

---

Item No:	CL-0018
Manufacturer:	North American Rescue Products
Certificates:	CE, Latex Free Red Tip Technology
Lengths available:	19 to 45cm 25 to 68cm
Country of origin:	USA
NSN no:	6515-01-537-2611
Tariff:	90189084
Weight:	42g

Increase the proficiency in gaining direct IV access with the BOA® Constricting Band, a now-critical component of successful IV cannulation.

Not since constricting bands were first conceived has the design been so fundamentally altered as it has been with the BOA®.

For improved central venous access every time, the BOA® uses a rolling action to transfuse venous blood to the distal veins while still allowing arterial flow. (For maximum effect, the BOA® is placed as high up on the extremity as allowable.) This technique distends the veins to make IV access quicker and more effective even in the most challenging patients.

The BOA®'s patented design features a Quick Click connector and two-finger Quick Release for added efficiency. No longer do healthcare professionals need to tie (and often re-tie) a constricting band. The BOA® decreases "time on task" for treating combat casualties, civilian trauma patients, or medical patients with poor vascular access.
